GENERAL BUSINESS ACTIVITIES

Sign Rigging

Successful sign installation or service requires a team of experienced project managers, foremen, installers and crane operators who work in conjunction with each other to achieve a safe and professional completion to every project. EVERY job is taken seriously and we strive to ensure that the customer is completely satisfied with our service.

Routing

Your company name and logo is cut out using an CNC router. For Large 3D signs and letters we will be using our CNC Router to cut the face of Perspex, wood, di-bond and aluminium.

Laser Cutting

Cut out letters is a popular choice for reception signage. Using brushed aluminum, rowmark abs or colored Perspex, our company name and logo is cut out using a laser cutter and placed against the reception wall or mounted on pins, depending on the look you prefer.

Customized Signs

Impressive display of corporate image. Many design options: acrylic, aluminium, painted timber, Plexiglass, digital graphics, 3-D lettering & logos. Variety of finishes available - frosted, vinyl and sprayed (paint) backings.

3d and led illuminated Signs

There is something to be said for the effect that 3D fabricated perspex letters give to any client or project. It gives the perception of something that has been engineered and produced and established. It is the next level in signage and definitely for clients who know what they want.
